The Exam Workshop

Sample with a practice task

Turn topics into tasks

A topic name does not specify what you must do. Turn confirmed material into actions such as explain, distinguish, calculate, justify or apply. Use template 2. In the fictional example, percentages is too broad. The task becomes calculate a discount and explain the method. That lets you choose a practice problem and check the response. Do not invent supposedly certain exam questions. Your topic map organizes confirmed material; it does not predict the exam. Record an authorized source for practice and feedback beside each task.

Your task

A group message says formulas are allowed, but the current exam page is silent. Write a clarification question and a checkable practice task about percentages.

Model answer and self-check

Question: Is a formula sheet permitted for this specific exam, and under what conditions? Task: Calculate twenty percent off fifty and explain the steps without an answer key. Result: forty. Materials remain unconfirmed until clarified.

Each rule has a source; each practice task describes an observable action.

Self-study preparation skills for adult learners. Not subject-specific exam tuition, therapy, a grade or passing guarantee, or an accredited qualification. Verify exam rules and allowed materials with your institution. Do not use improperly obtained exam materials or present someone else’s work as your own.
